

INSTALLATION & CARE GUIDE

128cm Nordic LED Ceiling Light
Modern Metal Statement Ceiling Fixture

Product options shown in the store listing

30-head or 42-head configuration • Black or gold finish • Neutral light or dimmable-with-remote option

Important notice

This is a general customer guide prepared from the available product listing, not an original manufacturer manual. Exact wiring, mounting hardware, voltage, wattage, weight, bulb details, and remote pairing instructions have not been verified. Always follow the instructions supplied with the actual fixture.

1. Safety first

- Use a qualified electrician for ceiling mounting and all electrical connections.
- Switch off the circuit at the breaker and verify the power is off with a suitable tester before work begins.
- Do not rely on the wall switch alone. Keep the circuit off while the fixture is being installed or serviced.
- Confirm the ceiling structure and mounting hardware can safely support the fixture's weight.
- Do not install a damaged fixture or use it if wiring, insulation, or components appear damaged.
- Follow local electrical regulations and the manufacturer's instructions. Do not guess wire connections.

2. Before installation

Check the package against the supplier's packing list. Inspect the ceiling base/canopy, mounting bracket, screws and anchors, fixture body, arms or light heads, any supplied light sources, and remote control (if included). Lay parts on a soft surface and check for damage or missing components.

Tools may include a suitable voltage tester, screwdriver, drill and appropriate ceiling fixings. The exact tools and fixings depend on the ceiling type and the supplied mounting system.

3. General installation sequence

1. Isolate power	Switch off the correct breaker and verify the circuit is de-energized.
2. Check the mounting point	Confirm the ceiling and electrical outlet/junction box are suitable for the fixture. A qualified installer should choose appropriate anchors and fasteners.
3. Fit the mounting bracket	Attach the supplied bracket using the manufacturer's specified hardware. Ensure it is secure and correctly aligned.
4. Connect wiring	Have a qualified electrician connect the fixture according to the product wiring diagram and local rules. Do not infer wire functions from color alone.

5. Attach the ceiling base	Carefully position the canopy/base over the mounting bracket and secure it using the supplied fasteners.
6. Assemble the arms and heads	Fit the arms, light heads, or shades in the order shown in the actual product manual. Do not force threaded parts.
7. Inspect the fixture	Check that all parts are secured, arms are positioned safely, and no wiring is pinched or exposed.
8. Restore power and test	Only after the installation has been checked, restore power and test operation. Stop if there is flickering, unusual noise, smell, heat, or tripping.

4. Using the dimmable remote option

This section applies only to the variation sold with remote-controlled dimming. Insert batteries if required, then follow the manufacturer's pairing and operating instructions. Button functions and pairing sequences vary by model, so do not assume a specific button combination. If the remote does not respond, check battery orientation and the supplied manual; contact the seller or manufacturer if the issue continues.

5. Cleaning and care

- Switch off the power and allow the fixture to cool before cleaning.
- Dust with a soft, dry cloth. Use only a lightly damp cloth if the manufacturer's care instructions permit it.
- Do not use abrasive pads, corrosive chemicals, solvents, or spray cleaner directly onto electrical parts.
- Periodically check visually for loose parts or damage. Isolate power and contact a qualified electrician if anything is loose or unsafe.

6. Troubleshooting

Light does not turn on	Switch off power before inspection. Have an electrician check the supply, connections, and compatibility with the product specification.
Remote does not respond	Confirm this is the remote-dimmable version, check the batteries, and follow the supplied pairing instructions.
Fixture feels loose	Stop using it, isolate power, and have the mounting hardware and ceiling support checked by a qualified professional.
Parts are missing or damaged	Do not install the fixture. Contact the seller with the order details and photos of the issue.

7. Product details to confirm

Before installation, confirm these details from the product label or supplier documentation: complete length × width × height; fixture weight; rated voltage and frequency; wattage; light source/bulb type and whether it is included; required dimmer/remote compatibility; ceiling fixing requirements; and applicable certification information.

This guide is illustrative and does not replace the original product manual. If the supplied instructions differ, follow the manufacturer's instructions and applicable local requirements.
