

PURPLE & ORANGE HALLOWEEN STRING LIGHTS

Supplemental User Guide

Product overview

Decorative string lights in purple and orange for seasonal Halloween displays. The product information supplied for this guide describes a corded incandescent string with a stated length of 20 ft and 100 bulbs.

IMPORTANT: This is a general supplemental guide, not a manufacturer-issued manual. Always follow the instructions and safety labels supplied with the actual product. Do not use the lights outdoors unless the product label and manufacturer instructions explicitly permit outdoor use.

1. Product information

Item	Information supplied
Product type	Purple and orange Halloween string lights
Lighting type	Incandescent bulbs
Stated length	20 ft (confirm against product packaging)
Stated bulb count	100 bulbs (confirm against product packaging)
Power	Corded electric; use only with a compatible outlet
Intended decoration	Halloween and seasonal displays

2. Before first use

- Read all product labels and any instructions included in the package.
- Check the string, bulbs, insulation, plug, and cord for damage before connecting it to power.
- Do not connect or use the product if any part is cracked, frayed, loose, wet, or damaged.
- Confirm the supply voltage and outlet are suitable for the product rating shown on its label.
- Plan the display so the cord does not create a trip hazard or pass near heat sources.

3. Setup and use

- Unpack the lights carefully and place the string on a dry, stable surface while inspecting it.
- Arrange the string without pulling, twisting, crushing, or sharply bending the wire.
- Keep the plug and electrical connections accessible and away from water.
- Connect the lights only after the installation area is ready and the string has been checked.

- Switch off and unplug the lights before repositioning, cleaning, inspecting, or storing them.

4. Outdoor-use and electrical safety

The product title or listing may describe the lights as suitable for indoor and outdoor decoration, but the exact weather-resistance rating must be verified from the product label or manufacturer. Do not assume the plug, controller, connector, or extension connection is waterproof.

- Use outdoors only when the manufacturer explicitly approves the complete set for outdoor use.
- Keep plugs and connections dry unless each component is specifically rated for the conditions.
- Do not immerse any part of the lights in water or install them where standing water may collect.
- Do not cover the lights with fabric or other materials that could trap heat.
- Keep away from flames, heaters, and other sources of excessive heat.
- Do not modify the wiring, plug, fuse, or bulb holders.
- Keep the product away from children and pets; it is decorative electrical equipment, not a toy.

5. Care and storage

- Unplug the lights and allow them to cool before handling.
- Wipe only as directed by the manufacturer; never wash or immerse the electrical string.
- Inspect for damage after use and before each seasonal installation.
- Store indoors in a cool, dry place, loosely coiled and protected from crushing or sharp objects.
- Keep any spare bulbs, fuses, and original packaging together if they were supplied.

6. Troubleshooting

Issue	What to do
Lights do not turn on	Unplug first. Check that the outlet is working and inspect the plug, cord, and bulbs for visible damage. Follow the product instructions for testing the outlet.
Some bulbs are dark	Unplug the string and let it cool. Check for visibly loose or damaged bulbs only if the product instructions permit the user to do so.
Cord, plug, or socket is damaged	Stop using the lights. Do not tape, splice, or attempt an electrical repair. Replace the product or contact the seller/manufacturer for a replacement.
Lights become unusually hot, switch or power source sparks	Stop using the lights. Do not attempt to do so, unplug without touching damaged areas, and discontinue use.

7. Important limitations

The precise electrical rating, bulb replacement type, fuse specification, maximum number of connectable sets, weather-resistance rating, and warranty terms were not independently verified for this guide. Use the ratings and instructions printed on the actual product and packaging as the authoritative source. If the supplied manufacturer instructions differ from this guide, follow the manufacturer instructions.

8. Keep this guide

Keep this guide with the product information for future seasonal setup. Before each use, inspect the lights and confirm that the installation conditions are suitable.

Prepared as a supplemental guide from the product details available at the time of writing. It does not replace the product's official instructions, electrical ratings, or safety certifications.
