

SOLAR HALLOWEEN GHOST GARDEN LIGHTS

General Product Guide & Safety Manual

Store	LightDecorHub
SKU	LDH-HAL-02831
Category	Halloween Lighting & Decorations
Document status	General guidance; not a manufacturer-issued manual

Important: The exact supplier model and official instructions have not been verified. This guide does not confirm the product's power source, weather rating, battery type, charging time, runtime, package contents, or installation hardware.

1. Before You Begin

Read the instructions supplied with the exact model before assembly or use. Keep the supplier's original manual and packaging for reference. If the manufacturer's instructions differ from this general guide, follow the manufacturer.

Package check

- Compare the items received with the supplier's package list.
- Inspect the lights, housings, wiring, solar panel (if supplied), mounting parts, and connectors for damage.
- Confirm the exact model, power source, battery requirements, and intended indoor/outdoor use.
- Do not install or operate damaged products. Contact the seller or manufacturer for guidance.

2. Safety Information

- **Outdoor use:** Do not assume the product is waterproof or weatherproof. Verify the published rating and use it only in the stated conditions.
- **Power and batteries:** Use only the power source and battery type specified for the exact model. Do not mix battery types or reverse polarity.
- **Moisture:** Keep plugs, connectors, charging ports, and electrical components dry unless specifically rated for exposure.
- **Placement:** Keep lights, stakes, and cables clear of walkways and areas where people may trip.
- **Children and pets:** Supervise use where small parts, stakes, batteries, or cords could present a hazard.
- **Heat and fire:** Keep the product away from open flames, heaters, and excessive heat.
- **Damage:** Stop using the product if wires, housings, batteries, or connectors are cracked, swollen, corroded, or damaged.

3. Installation & Placement

Use these general steps only after confirming the exact model's requirements.

- 1 Choose a stable location suitable for the product's verified rating and installation method.
- 2 Assemble only parts shown in the official instructions. Do not force connectors or modify components.
- 3 If a solar panel is included, position it as directed and avoid shade where the instructions require direct sunlight.
- 4 If ground stakes are supplied, insert them carefully without damaging buried cables, irrigation lines, or services.
- 5 Keep components stable and route cables to avoid tripping hazards.
- 6 Test the lights according to the model's instructions before completing the display.

4. Solar Charging (If Applicable)

The product title refers to solar garden lights, but the exact solar configuration has not been independently confirmed. Follow the supplied manual for panel positioning, initial charging, switches, battery access, and expected performance. Charging time and runtime vary by model, battery condition, season, shade, and weather.

Do not open sealed components or replace an internal battery unless the manufacturer explicitly permits it and provides instructions.

5. Operation

Use only switches, modes, remote controls, or timers actually included with the verified model. Do not assume a remote, timer, brightness control, or particular lighting mode is included. Keep the original instructions available for model-specific operation.

6. Cleaning & Storage

- Switch off the product and disconnect or remove its power source where the manufacturer permits before cleaning.
- Use only the cleaning method recommended by the manufacturer. Do not immerse the product unless specifically designed for immersion.
- Do not use abrasive chemicals or solvents unless approved by the manufacturer.
- Inspect the product before storage and follow the manufacturer's drying instructions.
- Store in a cool, dry place within the manufacturer's stated temperature limits.

7. Troubleshooting

Problem	Checks
Lights do not turn on	Check the switch, power source, battery orientation (if applicable), connectors, and model-specific activation steps.
Lights are dim or run briefly	Check battery condition and, if solar-powered, panel cleanliness, shade, and charging instructions.
Solar lights do not charge	Confirm the model is solar-powered; check panel placement and switches, then follow the exact manual.
Parts are missing	Compare the package with the supplier's listed contents and contact the seller.
Product is damaged or wet	Stop using it. Do not handle damaged electrical components while powered; follow manufacturer guidance.

8. Product Details to Confirm

Item	Verified information
Power source / solar panel	Not yet verified
Battery type / capacity	Not yet verified
Dimensions / materials	Not yet verified
Quantity / included accessories	Not yet verified
Light modes / runtime	Not yet verified
Outdoor / weather rating	Not yet verified — confirm before outdoor use

Complete these details from the exact supplier listing or manufacturer documentation before treating this guide as model-specific.
